smart phone
globe

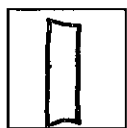

One tool you probably listed is a **map**. A map is a drawing that uses symbols to represent places and its main purpose is to show where places are located. There are many different kinds of maps. Here are several examples. For each one, discuss where the place is and what is shown on each map.

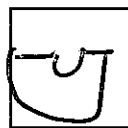

Ask your teacher for a map of your school to see what it shows. Once you are done, use the space below to draw a map of your classroom. Don't forget to use the key to provide detail.
